cunei Sam 3.1 it

Product: WEDGES SAM

Typology: wedges Sam code: AT35C Nominal dimensions (13x8x82)

Packaging: plastic bag containing 100 pcs.

Material property: Galvanized steel.

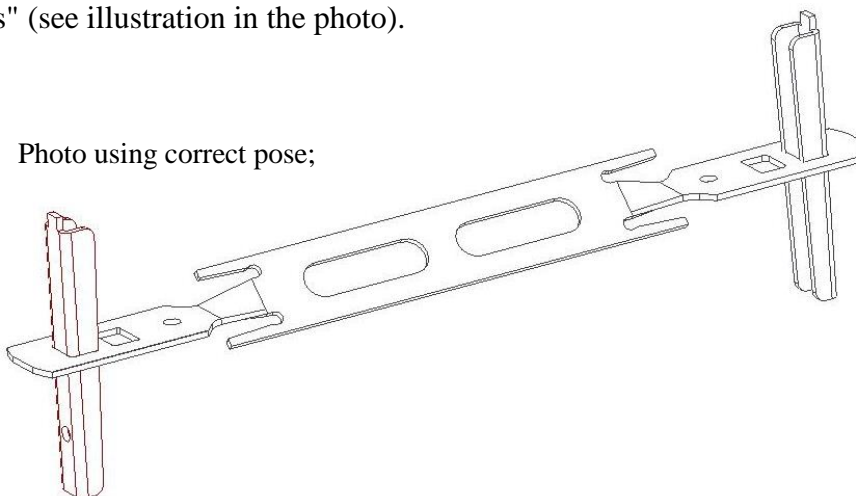

Description:

The Sam wedge [used together with the Sam spacer (Premet) and the Sam bracket (Premet)] has the function of blocking the wooden panel (27mm.) used for the construction of the formwork at the end of the stroke.

Pay close attention that when using the wedge, it must be inserted into the slot of the spacer as far as it will go (about halfway up the wedge), and oriented in the right direction "the belly of the wedge must be oriented outwards" (see illustration in the photo).

When used correctly, the wedge has the following characteristics:
one; quick and easy to arm and disarm the formwork.
two; secure locking (even in the presence of heavy loads).
